EnrollPro:

AN ACADEMIC INSTITUTION'S DIGITAL PLATFORM FOR OPTIMIZED STUDENT ADMISSION AND ENROLLMENT

Presented By:

Prado, Jhona

Sildora, Jegrick

Sudayon, Karyl Ann

EnrollPro Objectives:

to design and develop a EnrollPro: An Academic Institution's Digital Platform for Optimized Admission and Enrollment.

- Unified Admission System providing both Online and Face-to-Face (F2F) Walk-in registration modules.
- Centralized Registrar Dashboard integrating Enrollment Management and a Student Information Management System (SIMS).
- Academic Organization Module for Teacher Management and Grade Level Sectioning.

EnrollPro Objectives:

- Security and Communication Tools featuring System Audit Trails and Automated Email Notifications.
- System Configuration Suite for Academic Year management and Dynamic School Visual Identity.

EnrollPro Scope:

a web-based platform for optimized admission and enrollment.

- **Unified Admission:**
  - Supports both remote online applicants and face-to-face walk-in registrations.
- **Centralized Registrar Dashboard:**
  - Integrated Student Information Management System (SIMS) for digital profiling.
- Academic Organization:
  - Specialized modules for teacher management and grade-level sectioning.

EnrollPro Scope:

a web-based platform for optimized admission and enrollment.

- **Configuration Suite:**
  - Custom settings for academic year parameters and school visual identity.
- **Security & Communication:**
  - Integrated system audit trail and automated email notifications.

EnrollPro Limitations:

- Excludes grading management, class scheduling, and Learning Management Systems (LMS).
- Does not include the automated production of Form 137 (Permanent Records).
- Admission portal is online, while registrar and admin modules are locally hosted for offline stability.
- Supports new digital entries only; does not digitize legacy physical paper records.

A.T.L.A.S.

(AUTOMATED TIMETABLING AND LOCATIONS ALLOCATION SYSTEM):

A WEB-BASED ACADEMIC SCHEDULING APPLICATION.

Presented By:

Curio, Josh Nathan

Gilera, Rowena

Gromea, Nehje John

A.T.L.A.S. Objectives:

design and develop a web and mobile application with the following technical features:

- Web-based administrative portal with drag-and-drop scheduling interface.
- Configurable scheduling priority management module.
- Mobile faculty authentication with schedule preference submission.

A.T.L.A.S. Objectives:

- Automated timetable generation system
- Mobile-responsive student portal with real-time synchronized schedule dashboard
- Offline-first web application with online synchronization and real-time update capability

A.T.L.A.S. Scope:

- **Adaptable for Junior Highs:**
  - A flexible system designed for any school that has Junior Highs

- **For Students:**
  - A mobile-friendly website to view and download real-time schedule updates.

- **For Teachers:**
  - A simple portal to submit when they are available to teach and any health preferences.

A.T.L.A.S. Scope:

- **For Administrators:**
  - A smart tool that automatically builds conflict-free schedules, plus a "drag-and-drop" screen for manual tweaks.

- **Offline-First:**
  - Loads without internet so you can view schedules and safely save your work offline.

A.T.L.A.S. Limitations:

- **Strictly Scheduling:**
  - Does not handle student enrollment, grades, or attendance.

- **No Student Preferences:**
  - The schedule is built based on school rules and teacher availability, not student class requests.

- **View-Only for Students:**
  - Students can view and download, but cannot edit schedules or chat in the app.

A.T.L.A.S. Limitations:

- **Relies on Human Accuracy:**
  - The system is smart, but it cannot fix human mistakes (like missing data or conflicting rules).

- **Internet Required for Heavy Lifting:**
  - Generating the master timetable and broadcasting new updates requires an active connection.

Bachelor of Science in Information Technology 3 - B

A.I.M.S.

(AUTOMATED INTERVENTION AND MASTERY SYSTEM):

A WEB-BASED EDUCATIONAL PLATFORM WITH AI-DRIVEN ASSESSMENT AND DYNAMIC REMEDIATION

Presented By:

Orbigoso, Mikhoel Runo

Sagum, Patrick

Zambra, Maika

A.I.M.S. Objectives:

- **Develop a Web-Based LMS:**
  - A platform accessible on the internet to streamline online learning.

- **Centralize Digital Library:**
  - A single online repository where all lessons are kept and easily found.

- **AI-Powered Quiz Generator:**
  - A smart system that drafts quizzes (including essays) for the teacher to review.

A.I.M.S. Objectives:

- **Automate Grading:**
  - A tool that checks answers and computes scores based on teacher-defined rubrics.

- Implement Mastery-Lock:
  - An optional feature ensuring students understand a lesson before unlocking the next.

- **Provide a Real-Time Dashboard:**
  - A screen where teachers and students can instantly see grades and progress.

A.I.M.S. Scope:

- **Cross-System Integration:**
  - Automatically fetches schedules and sends partial grades to the partner groups' Class Record and Scheduling modules.

- **Cross-System Integration:**
  - Automatically fetches schedules and sends partial grades to the partner groups' Class Record and Scheduling modules.

- **Standardized Lessons:**
  - Ensures all students receive the exact same learning materials.

A.I.M.S. Scope:

- **Teacher-Controlled AI:**
  - AI generates questions strictly from uploaded files, requiring teacher approval before release.

- **Fair & Custom Grading:**
  - Teachers set the specific rules and rubrics for how answers are evaluated.

- **Evaluated for Quality:**
  - Rigorously tested to ensure it is secure, reliable, and easy to use.

A.I.M.S. Limitations:

- **Internet Dependent:**
  - Requires an internet connection for full functionality (syncing, grading, AI generation).

- **Inter-Group Dependency:**
  - Automation features rely on the successful completion of the partner teams' modules.

- **Teacher Validation Required:**
  - The AI question maker is an assistant and still requires human checking.

A.I.M.S. Limitations:

- Text-Based AI Only:
  - The system can read text files (PDF, Word) but cannot analyze videos.

- **Public School Focus:**
  - Optimized specifically for public school settings, not all school types.

S.M.A.R.T

(Student Management, Academic & Record Tracking)

Presented By:

Delicano, Rovin

Olmedo, Jirah

Roma, Sean Justin

S.M.A.R.T. Objectives:

To develop a web-based system with the following features:

- Control who can access the system (Admin, Teacher, Registrar). Role-Based Access Control (RBAC)
- Automated generation of school forms (SF9 & SF10)
- Automated grading and submission system
- Record all actions in the system (who did what and when)

S.M.A.R.T. Scope:

- Focuses on student information management
- Covers grading system and academic record tracking
- **Generates official DepEd forms:**
  - SF9 (Report Card)
  - SF10 (Permanent Record)
- Designed for secondary education institutions
- Implements a web-based platform for system access

S.M.A.R.T. Limitations:

- Does not include financial features (e.g., tuition or payments)
- Limited only to academic records and tracking
- Requires internet connection to function
- Applicable only to a specific high school setting

Thank You!
